STUFF

EMPLOYMENT

Scrum Master, BJSS, Leeds

Leeds, West Yorkshire, United Kingdom

2013-05 — Present

Initially involved in analysis of the existing legacy application and bid preparation prior to winning the contract. Role involved 2-week on-site pre-elaboration phase focussing on examination of existing proprietary codebase for the legacy application, code metrics, functional analysis, detailed discussion with Business Analysts leading to requirements gathering, discussions with the client's own Technical Architects, and investigation into candidate technologies for the bid. Following the pre-elaboration, Tom was then heavily involved in the proposal document that formed the basis of the bid. Producing key sections of the document including comparison of web technologies and frameworks, database systems, CMS. Following a successful bid, Tom was heavily involved in the Sprint Zero and Elaboration activities, setting up Git repositories, build servers, project structure and the reference architecture. This role required close teamwork with the Technical Architects to refine and agree the project's code structure and key design patterns around separation of tiers, REST APIs, database transactions and audit, module structure and coding standards.

- Analysis of legacy application
- Successful bid for new work
- Elaboration
- Team lead
